(Remote-Ready)

PROFESSIONAL SUMMARY

Full-stack engineer with 3+ years shipping enterprise-grade ERP and real-time systems for healthcare, education, and industrial clients — 6+ organizations, 50K+ end users, 15+ production releases. Specialist in Angular and React/Next.js on the frontend, Node.js/Express on the backend, and multi-tenant architecture with API-level role-based access control (RBAC). **AI-augmented developer**: uses Claude, GitHub Copilot/Codex, Gemini, and agentic IDE workflows daily as core engineering infrastructure to ship production-grade code faster without cutting quality. Consistently ties engineering decisions to measurable outcomes — sub-200ms APIs, 99.9% uptime, 60–70% reductions in load time and manual work.

TECHNICAL SKILLS

Languages & Frontend: TypeScript, JavaScript, Angular, React, Next.js, RxJS, HTML5, CSS3, TailwindCSS

Backend & APIs: Node.js, Express.js, ASP.NET Framework, REST API Design, Node-RED

Databases: PostgreSQL, MongoDB, MySQL

Real-Time & Messaging: WebSocket, MQTT, RabbitMQ, Real-Time Dashboards, Pub/Sub Systems

Cloud & DevOps: AWS, Git, GitHub, CI/CD, Linux

Architecture & Security: System Design, Multi-Tenant Architecture, RBAC, Enterprise ERP Systems, API Design

AI-Augmented Engineering: Claude (agentic coding & code review), GitHub Copilot / Codex, Google Gemini, Antigravity (agentic IDE), Perplexity (technical research) — daily, pro-tier workflow

PROFESSIONAL EXPERIENCE

Full Stack Developer — Angular Specialist

Enterprise Software Team | 2023 – Present

- Shipped a multi-tenant Hospital ERP now running across 3 facilities and 50K+ patient records, with RBAC enforced at the API layer, not just the UI
- Built a real-time dashboard engine (WebSocket, MQTT, Node-RED, RabbitMQ) streaming live industrial data at 99.9% uptime under continuous device load
- Cut core dashboard load time by 65% through code-splitting and query optimization; sustained sub-200ms response on core API lookups
- Reduced billing discrepancies by 70% by designing a configurable, rule-driven multi-facility billing engine
- Embedded Claude and GitHub Copilot/Codex into the daily workflow for code review, refactors, and architecture exploration, compressing delivery cycles without sacrificing code quality

Full Stack Developer

Freelance / Contract Engineering | 2022 – 2023

- Delivered a School ERP for 1,200+ students across 3 role-based portals (admin, teacher, parent) on one shared codebase
- Cut manual attendance paperwork by 90% with a real-time, role-driven attendance and fee workflow
- Built and deployed production Node.js/Express REST APIs on AWS; designed schemas across MongoDB, PostgreSQL, and MySQL

SELECTED PROJECTS

Hospital ERP — Angular, Node.js, Express, PostgreSQL, REST APIs, RBAC

Multi-tenant hospital management platform: patient records, ward/bed management, billing engine. 3 facilities live, 50K+ patient records, <200ms core API response.

Dashboard Builder — React, Next.js, WebSocket, Node-RED, MQTT, RabbitMQ

Drag-and-drop, ThingsBoard-style real-time dashboard engine for industrial device data. 10K+ live data points/min, 99.9% uptime, zero data loss via durable queueing.

School ERP — Angular, Node.js, MongoDB, REST APIs, RBAC

Role-driven school management platform for attendance, fees, and parent communication. 1,200+ students, 90% less manual attendance paperwork.

ENGINEERING FOUNDATIONS

Self-directed, project-first path through data structures, databases, and web fundamentals — into production Angular/Node systems within the first year, and into multi-tenancy, RBAC, and real-time architecture by year two. Ongoing practice: applying AI-assisted development (Claude, Copilot/Codex, Gemini) as a standing part of the engineering process, from architecture drafts to code review.
